Answers to questions for solicitation (B1900052) – JAIL INMATE STORAGE

1) Question: What size do the storage bins need to be?
   Answer: Bins should be a minimum size of 18” X 18” X 4” and sit on individual shelves. We do not want them to stack on top of each other.

2) Question: What safety features do we need to bid for the electric storage system?
   Answer: Provide only basic safety features.

3) Question: Can the County send AutoCAD drawings for this area?
   Answer: No. We do not have any DWG files for this building, only PDF’s.

4) Question: Will we need to have an escort while bringing materials in and out?
   Answer: Shelving contractor will be required to have an escort while in the building. This could take a little time depending on where they are at in the jail.

5) Question: Can we park a semi-trailer to store materials in or a dumpster in the loading dock?
   Answer: A trailer and a dumpster could be parked a few hundred yards west of the loading dock on the access road. They will need to be parked west of the sally port, or in the building parking lot east of the building. There will be a space that you can park in just west of the loading dock, but it will only accommodate a pick up.

6) Question: Will all off the shelving along the west and south walls be moving somewhere else?
   Answer: No. This shelving and washer and dryer will remain in place. New shelving system will need to work around these existing shelves.

7) Question: Will the tops of the shelving be to close to the fire sprinkler heads?
   Answer: The shelving will need to stay below the existing light fixtures. This will be approximately 2’ below the sprinklers and should be enough.
8) Question: How many storage bags are in the room now?

Answer: There are approximately 779 storage bags in the room now. Our goal is to get more bins than that in the room.

9) Question: Will the room be empty while we are building the storage rack system?

Answer: Yes, the room will be emptied prior to starting the installation of the storage system.

10) Question: At the walk through it was decided that the bin size should be 18” X 18” X 4”. Would a bin sized 20” X 15” X 5” be acceptable? It would provide slightly more capacity and is a standard size. Also, please confirm that the required material for the bin would be plastic (VS. cardboard)

Answer: Both sizes of bins, 18” X 18” X 4” or 20” X 15” X 5” would be acceptable sizes. We will require the bins to be plastic instead of cardboard.
