- MINIMAL AND AUTOMATIC HIGH TEMPERATURE SAFETY
NOTES:
1. Provide straight duct of standard inlet size for a minimum of three times the duct diameter and a maximum length of 120".
2. Flex duct at inlet connection is not acceptable.
3. Provide straight duct of increased inlet duct size for lengths over 120".
4. Provide 45° entry or 45° lead in at each connection to rectangular medium pressure ductwork per SMACNA (3rd Edition) Figure 4-6.
5. Provide conical saddle tap or tee at each connection to round or oval medium pressure ductwork per SMACNA (3rd Edition) Figure 3-6.
6. Provide straight duct of standard inlet size for three times the duct diameter or a minimum of 24".

MECHANICAL DUCT SYSTEM NOTES

1. DUCT SIZE IS INDICATED ON THE DRAWING. ALL DUCT SIZES LESS THAN 24" ARE GALVANIZED.
2. CONTRACTOR SHALL CONSTRUCT DUCTS IN ACCORDANCE WITH THE FOLLOWING:
   a. Materials: All ducts shall be fabricated from galvanized sheet metal, except as otherwise specified.
   b. Fittings: All duct fittings shall be made of galvanized sheet metal.
   c. Duct connections: All duct connections shall be made using clamps or rivets.
   d. Insulation: Duct insulation shall be installed according to manufacturer's specifications.

3. Extensive use is made of transfers, inlets, and outlets. Wherever possible, they shall be installed in a manner that simplifies the installation of the system.

4. All work shall be performed under the supervision of the architect and engineer.

5. All ducts shall be labeled with the name of the building, the building number, and the floor number.

6. All ducts shall be inspected by the inspector at the time of installation.

MECHANICAL SPECIFICATIONS

1. Ducts shall be installed in accordance with the latest edition of the National Fire Protection Association (NFPA) regulations.

2. All ducts shall be insulated with a minimum thickness of 2" of fiberglass insulation, unless otherwise specified.

3. All ducts shall be supported at intervals not exceeding 4 feet, and all supports shall be securely fastened to the structure.

4. All ducts shall be provided with a means of access for cleaning and maintenance.

5. All ducts shall be provided with a means of support and shall be anchored to the structure at intervals not exceeding 10 feet.

6. All ducts shall be provided with a means of balancing and shall be adjusted to the proper airflow.

7. All ducts shall be provided with a means of control and shall be operated in accordance with the requirements of the local codes.

8. All ducts shall be provided with a means of adjustment and shall be adjusted to the proper position.

9. All ducts shall be provided with a means of access for cleaning and maintenance.

10. All ducts shall be provided with a means of support and shall be anchored to the structure at intervals not exceeding 10 feet.

11. All ducts shall be provided with a means of balancing and shall be adjusted to the proper airflow.

12. All ducts shall be provided with a means of control and shall be operated in accordance with the requirements of the local codes.

13. All ducts shall be provided with a means of adjustment and shall be adjusted to the proper position.

14. All ducts shall be provided with a means of access for cleaning and maintenance.

15. All ducts shall be provided with a means of support and shall be anchored to the structure at intervals not exceeding 10 feet.

16. All ducts shall be provided with a means of balancing and shall be adjusted to the proper airflow.

17. All ducts shall be provided with a means of control and shall be operated in accordance with the requirements of the local codes.

18. All ducts shall be provided with a means of adjustment and shall be adjusted to the proper position.

19. All ducts shall be provided with a means of access for cleaning and maintenance.

20. All ducts shall be provided with a means of support and shall be anchored to the structure at intervals not exceeding 10 feet.

21. All ducts shall be provided with a means of balancing and shall be adjusted to the proper airflow.

22. All ducts shall be provided with a means of control and shall be operated in accordance with the requirements of the local codes.

23. All ducts shall be provided with a means of adjustment and shall be adjusted to the proper position.

24. All ducts shall be provided with a means of access for cleaning and maintenance.

25. All ducts shall be provided with a means of support and shall be anchored to the structure at intervals not exceeding 10 feet.

26. All ducts shall be provided with a means of balancing and shall be adjusted to the proper airflow.

27. All ducts shall be provided with a means of control and shall be operated in accordance with the requirements of the local codes.

28. All ducts shall be provided with a means of adjustment and shall be adjusted to the proper position.

29. All ducts shall be provided with a means of access for cleaning and maintenance.
